

Sabrina Heydel

AI Product Builder | Business Systems, Automation & AI

From business problem to working product. I design and build digital systems that connect workflows, data, automation and AI — from discovery and UX to implementation and deployment.

WHEN TO BRING ME IN

- Your teams are losing time between disconnected tools.
- You need a CRM, internal tool or business interface that actually fits the way your team works.
- You have an idea or operational problem and need someone who can turn it into a working product.
- A critical workflow still relies on spreadsheets, emails or manual tasks.
- You want to introduce AI, but need to identify where it creates real business value first.

ABOUT

I work at the intersection of business, product and technology. My role is to understand how a business actually works, identify where the friction is, and turn that problem into a digital product or system people can use.

I can take a project from discovery to a working implementation: workflows, UX, data structure, APIs, automation, AI integration, testing and deployment. I don't start with AI. I start with the business problem — then use AI where it genuinely improves the workflow, access to information or decision-making.

FEATURED PRODUCTS

Proprietary systems · Demo on request

01 A360 OS | AI-Powered Business Operating System

DEMO ON REQUEST

BUSINESS PROBLEM

Business information, customer data, actions and decisions are often fragmented across CRM, emails, documents and multiple tools.

SYSTEM BUILT

A unified business interface where teams can access the right information, manage workflows and make better decisions. An AI copilot orchestrates specialized agents to retrieve and exploit information, prepare actions and automate execution — while keeping human validation at key decision points.

Product strategy

Business process analysis

UX

Data architecture

AI orchestration

Automation

Human-in-the-loop workflows

Implementation

02 Radar 360 | AI-Assisted Prospecting System

DEMO ON REQUEST

BUSINESS PROBLEM

B2B prospecting requires too much manual research, qualification, personalization and follow-up.

SYSTEM BUILT

A multi-source prospecting system that identifies and qualifies companies, detects business opportunities, prepares contextual outreach, tracks follow-ups and analyzes responses to recommend the next best action.

Principle · AI assists research, qualification and decision-making. Humans remain in control of sensitive outreach and commercial decisions.

HOW I WORK

Understand

Business discovery · Process mapping · User needs · Use cases

Build

UX · Internal tools · CRM · Dashboards · Data · APIs · AI workflows

Deliver

Testing · Implementation · Documentation · User adoption · Analytics

OTHER PRODUCTS I'VE BUILT

TalentFlow AI

A bilingual recruitment workspace combining candidate pipeline, dashboards, candidate intelligence and interview preparation into a single experience.

Real Estate CRM & Platform

A connected real-estate platform turning website interactions, calculators and qualification forms into actionable CRM leads, with scoring, pipeline management and next actions.

PROFESSIONAL EXPERIENCE

- Agence 360 Digital** Founder — AI Product Builder 2025–Present
Business discovery, product building and digital systems for SMB teams.
